

Provider Electronic Solutions (PES) v2.21

Included in PES version 2.21 are the following system enhancements:

- The PES Other Provider list now allows the addition of different providers with the same EIN *and* Taxonomy. This will support the addition of hospital providers who have the same EIN and taxonomy..
- The default code qualifier value in the PES “Provider” and “Other Provider” lists has been set to XX in order to support the typical (NPI) value. For atypical providers without an NPI, the qualifier can still be changed to 1D in order to support the VT Medicaid ID
- Place of Service 35 is no longer valid for Professional claims. It is valid for Dental claims only and that is reflected on the claim forms, drop downs and error codes

Note: When upgrading PES, the upgrades must be completed incrementally. You cannot skip versions without risking database corruption. For example, if you are running PES version 2.19, you must upgrade to 2.20, then 2.21. To see which version of PES you are currently running, log on to PES, then click on Help, About.
