

## **Provider Electronic Solutions (PES) Software V2.25**

Included in PES version 2.25 is the following enhancement:

- PES has been modified to support the 5010 HIPAA standards. Please note this upgrade is mandatory for all PES submissions made on or after January 1, 2012.
- Providers submitting claims up through the end of 2011 should continue to use their current PES software version (2.23 or 2.24).
- Once the upgrade to 2.25 is complete; providers must wait until 1/1/2012 to submit claims. As of 1/1/2012 all PES transactions must be submitted using version 2.25

Note: When upgrading PES, the upgrades must be completed incrementally. You cannot skip versions without risking database corruption. For example if you are running version 2.23, you must upgrade to 2.24, then 2.25. To see which version of PES you are currently running, log on to PES, click on Help, About.

**Important:** For PES users on version 2.23; before upgrading to 2.24, logon to PES and click on Forms / Institutional Inpatient, or click the yellow and black building shaped icon. If you get an error, you MUST apply the 2.24 fix upgrade; otherwise, you should apply the standard upgrade. This does not apply to the full install.
